Manage your subscription and turn off automatic renewal at any time by going to My Account or through iTunes.See for the Privacy Policy and other terms that apply to your use of Prime Video. November 13, 2020 Version 8.18.1 Bug fixes and performance improvements First of all I use iPhone XR for any developer reading this. I read a review that says if you pause it with just a few minutes to go, and then you start, it shrinks to the next episode. I didn't notice it, but I'll keep an eye out. I don't think they used Apple devices. The next thing they suggested was a button to clear the history of the watch for a specific show so you could look at it again and know where you went. Otherwise, it shows you've seen it all before. I agree that would be a great trait. Sometimes we all want to see a good show again just to get zoned with until we go to sleep. My suggestion is that the phone clock show up while it's paused. I often just want to check the time I watch the show quickly. I don't want to go out and come back every time. I think that's it for now. I didn't use it a ton, but I usually watch the premiere on TV. Update / Edittdk if the problem is with the fire stick or if it works and the application or maybe it's just a show (The Glades), but several times per episode the sound is interrupted only about 2-3 seconds, but it's a long time when people talk and I couldn't hear what he said. I'll add details if I notice it on another show or on another device. Trying to watch Bosch and constantly going back to the same old episode I watched. 3, now four episodes ago. I can't indicate he played. It's not going to save anything I'm looking at. It starts with the same old episode. There's no help on the Internet. I think that's the problem with AutoPlay. It started when I let it play out automatically. This happens on a lot of shows. That's what I hate browsing and all. I want to find a movie in but I have to move and move and move first..... find category category if it is. Why don't they give us a genre option in cards or somewhere?. Scrolling endlessly to find things is why I stop watching this app very often. I'm going to one of the other three I have instead. It happens every day. This app is generally frustrating and boring to use. I would never pay for that. I'll never buy a feature either. To 'sneak' them in and make it look the same as everything else is met with treacherous and trembling. It's not like this company is hurting for money. But their clients could be and don't concern you. I've generally had good experience with Whole Foods grocery delivery, but I've had a bad one recently. I ordered food almost 24 hours before delivery was expected. By 10 p.m. when she didn't arrive (it was supposed to be delivered between 7 p.m. and 9 p.m.) I reached out to customer service who told me that the order would not be delivered because all items were unavailable. I was referred to a Whole Foods phone number that directed me back to prime service. When I finally got someone on the phone they told me that my order wouldn't come that night, but that it would come the next day. If I hadn't contacted customer service, there would have been no notification if my order wasn't coming. If I'd known earlier that I could have gone to the store in person before it closed. Instead, I was without food. I received texts during the day in which he updated me on an order indicating that the customer was filling it out. The status of the online order marked it as delayed, but in its own way. I was woken by a note at 1am saying my order had been cancelled without explanation. Development website App Support Privacy Policy 54 verified reviews Write Review Please rate these 54 reviews It is clear that Amazon Prime has reached a long way since it was first introduced. Some of his TV series and movies have won awards, and you can watch them all through this service. In case you missed something you'd like to watch later, you can use a third-party app to download any video or movie you want on your PC or Mac. We will explain how everything works in more detail in the article below. Using Native Windows 10 AppAmazon finally launched the native Prime Video app for Windows 10 in the Microsoft Store in July 2020, which gives every Windows user the ability to download their favorite series and movies directly to their laptop. The app is pretty similar to Amazon's mobile apps, albeit with an improved interface for mouse and keyboard controls. There are two real differences between using this app and the web version, and that comes down to quality and downloads. Similar to the company's iPad app, streaming quality in the Windows app is limited to 720p, while streaming from browsers allows playback as high-res as 4K. Most laptops these days have a resolution of 1080p, but if you're using the new XPS 13 with a pixel-perfect 4K display, it's disappointing to know you'll have to hold websites in order to take advantage of the screen. From trade-off here comes with finally being able to download Prime content to your laptop, and for most viewers, it's well worth the drop in resolution. You can download anything you can usually download from prime on your phone or tablet here, and you can use the Download options in the settings menu to make your downloads larger or smaller. While the Windows 10 app isn't perfect, it's exciting to finally have the ability to download movies and shows from Prime directly to your laptop. Using third-party methods If you do not use a laptop running Windows 10, but still want to download movies or shows from Prime, you are not completely out of luck. Three third-party apps can help you a lot here, but they're far from perfect. Using any of these apps, you take responsibility into your own hands, so use on your own discretion. Watch Movies Without a Subscription with PlayOnAmazon Prime recently introduced a new feature called Free with Ads. It allows you to watch more than 5,000 movies and 1,000 TV shows without a subscription. If you're using a screen capture program, you can watch the movie later without ads. We recommend that you use PlayOn to record videos on Amazon Prime. You can quickly record and download any movie or TV show, and you can watch it later from almost any device. The PlayOn app lets you move videos you downloaded from Amazon Prime to any other device to watch later. That's great when you don't have time to finish a TV show or movie you paid for. Record it and save it for later. The app will download the video in MP4 format supported by all devices. You can even stream movies from consoles or Chromecasts.The PlayOn Desktop app also lets you download as many movies and TV shows as you want. You can try it out for five free shots, but you'll need to spend some money if you plan to keep using the app. Keep an eye out for official websites as you can find all types of sales, discounts and offers there. PlayOn can help you download everything you like from Amazon Prime without putting yourself or your devices at risk. Unfortunately for Mac users, PlayOn is for Windows only.UkeySoftUkeySoft is one of the most effective online video recording programs you can get today. It can record any video on Amazon Prime, but you can also use it to make movies on Hulu, YouTube, iTunes, Vimeo, NetFlix, and many other services. What's great about this app is that it can record in HD and you can choose the format of the video you want to download. Options include MP4, MOV, AVI, TS, WMV and many others. UkeySoft is easy to work with because it shows all your options before you download the video. The process looks like this:Install and open UkeySoft on your computer. Select the area of the screen you want to capture. Select an audio input channel, best settings for the best sound quality. Set the downloaded video format. Making a movie The TV show you want on Amazon Prime.Edit downloaded video with tools provided. As you can see, you can record and download any video on Amazon Prime with this app, and you can add some effects and edit the video as you like. UkeySoft is available for Mac and Windows.FonePaw Screen RecorderFonePaw Screen Recorder is another program to help you download your favorite shows with Amazon Prime. This gives you some useful options for downloading videos. For example, you can select input and output sound, and the resolution of each FonePaw video also has other useful options. The app also allows you to capture only part of the screen. You can choose a format for downloading torn videos and choose between standard MP4, F4V, MOV, and AVI. The process looks like this:Download the screen recorder and start it. Find the video you want to download on Amazon Prime and note the hit. Pour in the information you're looking for and choose the quality of the downloaded video. Start recording and click save when you're done. Watch downloaded videos at any time. FonePaw is available for Mac and Windows.Transfer Your Downloads to Any DeviceAll from third-party screen capture programs covered by this article have the ability to download videos that you want to watch later. Because you can choose the size, format, and quality of each download, you can choose specific formats that you can then see on other devices. Apps like these can be especially useful if you spend a lot of time traveling and don't have too much time watching movies on Amazon Prime. Try them and they may never return to watching movies online. Online.
